### **Use the Right Lubricant Every Time**

I didn't realize how much spray lubricants differ until I met with experts from Liquid Wrench. Liquid Wrench makes a range of lubricants and penetrating oils to help stop squeaks, loosen stuck fasteners and protect moving parts. Most of us tend to grab whatever lubricant is handy to do a job. But that can present a problem—some lubricants attract dust, which can create a dirty mess, and others cause plastic parts to disintegrate.

To make it easy for DIYers to pick the right lubricant, Liquid Wrench has placed a mobile code on each can of lubricant. You can text the mobile code from your cell phone to get instant advice on what surfaces the lubricant can be used on. This will help you buy the right lubricant, then use the right one when you have several cans in your shop.

Liquid Wrench also redesigned the cans to make the labels easy to read and make the mobile code prominent. The cans are now available in a convenient six-pack, which contains six popular types of lubricant (penetrating oil, lithium grease, chain lube, silicone spray, lubricating oil and dry lubricant). The six-packs may not be available in your area yet, but you can buy the individual cans for less than \$5 at hardware stores and Lowe's (find other retailers on the company's Web site).

Liquid Wrench, (877) 973-6247. [liquidwrench.com](http://liquidwrench.com)
