Liquid Wrench Launches New Grease Product Line

Liquid Wrench recently launched a new line of grease products. The line features six specialty grease products.

Liquid Wrench Multi-Purpose Grease is ideal for general to medium use such as on pinions, gears and latches. It is also available in a three-pack.

The white lithium grease is fortified with extreme pressure and anti-wear additives as well as oxidation and corrosion inhibitors. It's best used for lubricating hinges,

battery terminals, light to medium bearings and gears.

Liquid Wrench Marine Grease delivers superior rust and corrosion protection and has excellent resistance to water, making it ideal for trailers, sprockets and bearings.

Trailer bearing grease delivers high oxidation and corrosion resistance on wheels, bearings and gears for heavy-duty applications in extreme weather and moisture conditions.

Finally, high temperature disc and drum brake wheel bearing grease is fortified with extreme pressure additives, making it ideal for areas where water washout is a major concern, such as a submerged trailer axle.
